

LiveData Procedure Suite Planner™

Hospital service lines like cardiology, endoscopy, and radiology are key drivers of procedure suite volume. However, managing these rooms can be complex and time-consuming, requiring careful coordination of staff, anesthesia services, equipment, and supplies. LiveData Procedure Suite Planner helps hospital service lines improve procedure room utilization, increase efficiency, and ensure the quality of their invasive procedures.

Electronic Health Record (EHR) tools force clinic and hospital schedulers to engage in inefficient and redundant communications when identifying and claiming unused procedure room time. Procedure Suite Planner solves these communication issues by allowing clinic schedulers to view procedure room slots in real time without multiple phone calls, faxes, and endless keystrokes in the EHR.

Procedure Suite Planner includes two modules:

1. Case Planner

Enables clinical staff to track cardiology, endoscopy, and radiology procedures—as well as those not in the VistA surgical package—from their clinic and coordinate with the necessary parties.

- PreOp Workup ensures that patients are ready for their procedure, avoiding cancellations and rescheduling
- Anesthesia Services can easily plan and coordinate their schedule by viewing which cases require their services in Procedure Suite Planner

2. Block Planner

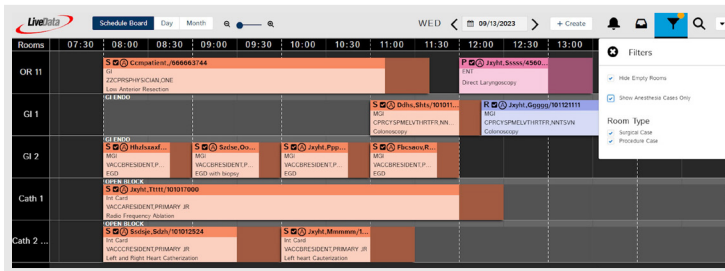

Allows you to control your room's block schedule with two views:

- Primary Block displays the facility's central schedule
- Weekly Block allows staff to override the central schedule to accommodate vacations, room closures, maintenance, etc.

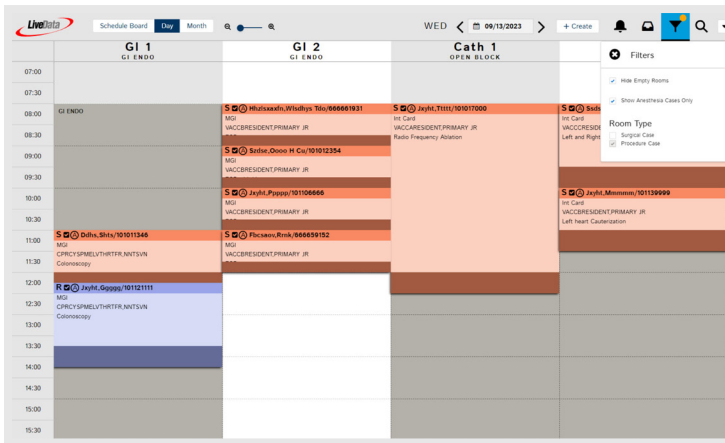

For hospitals, Procedure Suite Planner provides advantages to both the hospital and schedulers:

Procedure Suites service lines can optimize their daily schedule to achieve departmental goals such as reducing cases sent to community care.

Schedulers won't have to spend valuable time coordinating staff, anesthesia services, equipment, and supplies over the phone.

Procedure Suite Planner improves scheduling workflow by visually coordinating the patient's steps from first referral through preparation to scheduling.

Procedure Suite Planner includes powerful filters that allow schedulers to hide empty rooms and show only anesthesia cases, procedures, surgery, or all three cases.

Working Together For Those Who Serve Our Veterans

Document Storage Systems, Inc. (DSS) is a catalyst for health care innovation and digital transformation, helping the Department of Veterans Affairs as a solutions provider, solutions integrator, and services contractor. DSS is committed to assisting VA in its High Reliability Organization journey and delivering care quality for Veterans by meeting top initiatives, changing regulatory requirements, and implementing enhanced business transformation across VA enterprise.

LiveData develops and deploys surgical workflow solutions for operational efficiency and patient safety. Surgery departments using LiveData PeriOp Manager have documented significant improvements in Key Performance Indicators including block utilization, case scheduling accuracy, first-case-on-time-starts, cancellations, and turnover.
